## Wet Friction Product Specifications\*

### **BRAKETEX® P-42**

#### **Description**

100% KEVLAR® fiber composite material is a non-molded and non-paper, textile-reinforced polymer containing no asbestos. Offers improved performance for all wet clutch and brake applications, featuring dramatically higher energy threshold to failure. Available bonded to carrier plates.

#### Physical and mechanical properties

Composition 100% long KEVLAR® fibers and proprietary

polymer binders feature higher temperature resistance than phenolics. Includes no metal,

no abrasives, no cotton, and no fillers.

Density 0.88 g/cu. cm (0.032 lb./cu.in.)

Shock resistance Excellent (does not crack, chips, or break)

Abrasiveness Non-abrasive to opposing surfaces

Porosity Unique "open, continuous-pore" structure

(Characteristic of proprietary textile-reinforced

composite production process)

**Operating conditions** 

Static pressure As limited by bond and carrier plate

Dynamic pressure 140 - 2760 kPa (20-400 p.s.i.)

Upper limit not yet determined

Oil Bath Temperature Ambient to 150° C (300° F) in automatic

transmission fluid

Ambient to 205° C (400° F) in silicone oil

Lubricant/Coolant No known limitations. Resists ethylene glycol.

Opposing surface No fine finishing required, runs against steel, iron,

stainless steel, copper, hard aluminum.

Surface speed, temperature, and pressure are interdependent energy parameters. Values represent typical conditions and are not the ultimate limits of the material. Burnish time to achieve full mating surface contact can be three to five times that of conventional materials.

# Approximate wet friction properties in automatic transmission fluid (after extended burnish)

Wear rate 1/2 to 1/5 that of organics and paper,

1/2 to 1/3 that of sintered bronze materials

Dynamic coefficient of friction 0.10 to 0.15 μ in the 23 - 290 W/sq. cm range

(0.2 - 2.5 HP/sq. in.)

Approximately 10% higher than paper, maintaining coefficient beyond the energy limits of sintered bronze.

Static to dynamic ratio 1.05 - 1.15

\*All values shown are approximations derived from a variety of tests and field applications. No warranty or implied liability assumed herein. Friction values shown are for guide purposes only, as actual values can deviate with individual design and operating conditions.
